Brussels, 31st March 2021

Dear Executive Vice-Presidents, Vice-President, Commissioners,

The Computer & Communications Industry Association (CCIA Europe) looks forward to the European Commission's forthcoming legislative proposal on trustworthy Artificial Intelligence (AI). We welcome the Commission's dual emphasis on building European excellence and trust in AI. Your efforts are crucial in ensuring that AI can support Europe's economic recovery, green and digital transitions, and help Europeans, e.g. through improved healthcare.

In anticipation of your forthcoming AI proposal please allow us to share our recommendations:

- A proportionate and risk-based EU approach can maximise the benefits of AI, while also mitigating risks.
- New legal requirements should focus on a narrowly defined set of so-called 'high-risk' AI applications. Determinations of what constitutes high-risk AI applications should focus on specific use cases rather than blanket technology categories and not conflict with planned or pending regulations that are already being developed to ensure safety and trustworthiness.

**Computer & Communications

Tech Advocacy Since 1972

- We recognise the importance of having a robust system in place to ensure companies are held responsible for testing their products before they are introduced into the EU market. However, we caution against imposing conformity assessment requirements, which would delay bringing AI innovations to the EU market and encourage European innovators to launch elsewhere.
- We are encouraged by the EU's efforts to build international alliances with like-minded partners. We support the European Commission's ambition to find convergence between the EU and the U.S. approach on the governance of AI and other emerging technologies.
- On the review of EU liability rules in the context of AI expected later this year, we would caution against any sweeping changes to the long-standing European liability framework that has proved to be both effective and technology-neutral.

We hope our recommendations will be useful to you and we stand ready to provide further information.

Best regards,
